the power of

elōs

Look as young as you feel,
with elōs.

Beautiful Skin.

Superior technology. Safe, beautiful results.

Choosing a solution for the effective treatment of unsightly leg veins and facial vascular conditions was once a confusing and difficult decision. Many methods and technologies promise the best results, but most fall short.

elōs,[™] a new revolutionary technology, has changed everything.

Simply put, elōs is proven to be the safest, most effective and comfortable solution for the superior results you demand.

How does elōs work?

elōs uses a unique combination of radio frequency and light to isolate and effectively treat the problem area, leaving the surrounding skin free from potentially harmful side effects. This revolutionary combination makes elōs the safest, most effective technology available for treating leg veins and vascular lesions like spider veins.

elōs outperforms systems that use only one energy.

Is this a no-downtime procedure?

Absolutely. elōs procedures require no sedation. The average procedure takes less than 30 minutes to perform. Immediately following your procedure, you can return to work or your daily schedule with no problem.
