

You might ask is the S-Lift for you? If you're excess or lax facial or neck skin is bothering you, an S-Lift could be in your future. The best candidates are men and women that are in good health, typically between 30-60 years of age, have mild to moderate lower face and/or neck laxity, have realistic expectations, and want to stay ahead of the aging process.

"My patients tell me their friends say that after their S-Lift they didn't look like they had surgery. They just look younger and happier. One reason is that the tell tale scar is eliminated in the temporal region and in the scalp behind the ear," according to Dr. Lyons. Other benefits include a faster recovery time, less risk of complication, and a more natural look. For many of our patients, the "wind tunnel" look caused by overly taut skin following a facelift is no longer acceptable. They desire a more "natural looking" rejuvenation. Busy patients demand more immediate results with little downtime.

S-LIFT

YOUR FACE PROVIDES A
LASTING IMPRESSION
OF WHO YOU ARE
AND HOW YOU FEEL,
HOWEVER...

IT
DOESN'T
HAVE
TO TELL
YOUR
AGE

ARE YOU
LOOKING FOR
AN ALTERNATIVE
TO A TRADITIONAL
FACELIFT WITH LESS
DOWN TIME WHILE
SAVING MONEY?

DOES THE THOUGHT
OF HAVING A MORE
YOUTHFUL
APPEARANCE
APPEAL TO YOU?

THEN CONSIDER THE
S-LIFT

THE S-LIFT

The S-Lift is a mini-facelift that provides an overall lift to your neck and the lower third of your face. Compared to a traditional facelift, it is a less invasive operation with fewer complications and a much faster recovery. The S-Lift is particularly well suited for the middle-aged and younger patients and can make a dramatic change in the way you look by tightening sagging muscles and skin of the cheeks, chin and neck. The S-Lift gives you a natural look, faster recovery time, minimal risk, minimal scars and no hair loss.

The S-lift is performed under a local anesthetic with mild sedation and is usually combined with face and neck laser assisted liposuction. The S-Lift procedure removes excess fat from the cheeks, chin, and neck area while tightening the skin. The S-Lift requires an S-formed incision in the area forward of the ear. The skin is lifted and the underlying muscles and tissues are tightened and repositioned. The incision line is closed using fine sutures. The recovery is faster due to a special new superior technique (see fig.2) that is less invasive. The surgery usually takes a few hours to perform.

Results from your procedure can be enhanced with the Fotofacial RF Skin Rejuvenation System used in conjunction with other therapies such as chemical peels to smooth out wrinkles and provide further skin contraction. The Browlift surgery as well as fat transfer may also be performed at the same time to rejuvenate the forehead and midface (see fig. 1). We combine these minimally invasive procedures to achieve a more dramatic impact and obtain your new youthful appearance with less down time or pain. In conjunction with these procedures we use the Erchonia Medical Laser to accelerate healing. Most patients experience a reduction in blood loss, less postoperative pain, and better skin re-drapage and retraction.
