

THE SIGNATURE LIFT

[Minimal Incision Facelift with Fat Transfer]

The Signature Lift is our most well regarded facelift procedures. It provides the long lasting results of the traditional facelift, while incorporating less invasive techniques to the sags and jowls so often seen with the aging process. It provides a dramatic elevation to the lower third of your face and neck. Compared to a traditional facelift, the neck and jowl are treated less invasively, and the elevation and tightening of the muscle layer of the midface employs an improved suture technique that not only tightens the deep structures but also elevates them as well. The beauty of the youthful face is restored with improving the cheek structure and directly elevating and flattening the nasal fold. This procedure includes microliposuction to the jowls and neck and transferring fat from the lower abdomen or thighs to the midface for maximum rejuvenation. These fat grafts help to not only refill some of the lost collagen and saggy tissues of the face, but they also induce new glycoprotein synthesis {collagen growth} in the skin. When a chemical peel is added to fat grafting, it tightens, brightens and polishes the skin. It also reduces fine lines and wrinkles, especially around the mouth and crow's feet regions.

The Signature Lift is a minimally invasive facelift procedure designed to give maximum rejuvenation with faster recovery utilizing a shorter incision. This procedure is well suited for middle-aged patients seeking to reduce sagging muscles and skin of the cheeks, chin, and neck. Most patients have the procedure in the office based operating suite under a local anesthetic with mild sedation. The surgery usually takes a few hours to perform. Results from the surgery can be enhanced with Fotofacial RF Skin Rejuvenation System used in conjunction with home therapy such as Obagi and Retin-A. Eyelid and Browlift surgery may be performed at the same time to achieve a more dramatic impact. The Erchonia Medical Laser is used as well post operatively to accelerate healing.

“My patients tell me their friends say that after their Signature Lift they didn’t look like they have had surgery. They just look younger and well rested.” Other benefits include a faster recovery time, less risk of complications, and a more natural look.

“Dr. Lyons and his staff were wonderful and I am thrilled with my result”
